

Anti-tack for Compounds

PROMOL SL 5500

PROMOL SL 5500 is a whitish liquid used in the rubber industry to prevent surface sticking of unvulcanized rubber compounds in the form of sheets, strips, extrudates or blanks. It is used in the dipping unit of batch-off lines or with similar application devices.

The product offers numerous advantages:

- excellent separation effect for wide range of rubber compounds
- low consumption rates in comparison to similar products available on the market
- very uniform release coating due to excellent wetting properties
- resistant to foam generation
- sufficient grip for enhanced mill and extruder feeding
- very high compound compatibility

AVAILABLE PACKAGING

DESCRIPTION	NET QUANTITY
IBCs	1.000 kg
Steel drums	200 kg
HDPE jugs	10/20 kg
